Price Assessment Specification Guide	15

Introduction

The methodologies employed by BigMint are designed to generate price assessments that accurately reflect market value within specific market segments.

In this context, "assessment" refers to the benchmark established for a particular commodity, characterized by specific grades and specifications, with its price computed based on a defined market location.

We use the term index in certain assessments to refer to the price of a key commodity in a specific region, which serves as a benchmark for determining the value of similar commodities in that market.

The price assessments are conducted by our analysts, who actively gather market data from knowledgeable market participants.

Through this document, our objective is to establish standardized practices for evaluating various commodities, ensuring consistency among our analysts. This approach aims to uphold the integrity of our price assessments and foster trust among stakeholders.

How this methodology statement is organized

This description of methodology for assessments is divided into seven major parts (1-7) that parallel the process of producing price assessments.

Part 1 delves into the concept of methodology, elucidating its purpose and the benefits it offers various industries. This section also underscores the criteria used to design a methodology for a given commodity, while providing an overview of the process involved in developing such methodologies.

Part 2 discusses the significance of market study, outlining why they are crucial, and explores the diverse range of analytical tools utilized for conducting comprehensive market analyses.

Part 3 provides an overview of how BigMint collects market data, validates it, and uses it to formulate price assessments. It explains the methods used to handle

anomalies, normalize data, and apply judgment in the process. It also outlines the checks and approvals conducted to verify the accuracy of price assessments, as well as the defined publication schedule and process for corrections.

Part 4 presents a schematic diagram outlining the entire process of developing price assessments, highlighting the various conditions encountered, along with additional process flowcharts.

Part 5 outlines the established practices adhered to according to the principles set forth by IOSCO.

Part 6 details the standard procedures for implementing changes to the methodology and approval process, and provides a comprehensive record of these modifications.

Part 7 provides an exhaustive list of assessments, delineating their attributes and publication schedules within the scope of BigMint's price reporting portfolio.

Methodology Flowchart: Process Overview

1. Methodology process

This section defines and underscores the importance of methodology in the commodity market, highlighting its crucial role in ensuring the accuracy and reliability of price assessments.

1.1 What is methodology

In the fast-paced world of global markets, accurate and reliable price assessments are crucial for informed decision-making among market participants. Establishing fair and transparent pricing forms the foundation for efficient market operations, providing stakeholders with dependable benchmarks for executing contracts and related trades.

The methodology refers to a structured and consistent set of procedures used to determine commodity prices within specific markets. It serves as a framework for transparency, ensuring that the processes behind price assessments are clear and well-understood, allowing market dynamics to be effectively captured and reflected in the final price computation.

1.2 Purpose of methodology

The methodology is meticulously designed to capture market dynamics and factors influencing prices, thereby striving to accurately reflect the true value of commodities. Additionally, it establishes standardized frameworks, ensuring consistency and comparability in evaluating prices across diverse markets. Moreover, methodologies foster trust among stakeholders by making the price assessment process clear and understandable.

1.3 How methodology benefit businesses

Methodology-based price assessments provide businesses with a structured approach to pricing decisions, offering valuable insights and tools to navigate dynamic market conditions effectively. By leveraging these reliable methodologies during negotiations, businesses strengthen their bargaining position, mitigate risks, and facilitate fair agreements with stakeholders, ultimately leading to profitability. Moreover, adherence to established methodologies ensures regulatory compliance, minimizing the risk of legal disputes.

1.4 Criteria used to develop methodology

The criteria used to develop BigMint's pricing methodology are primarily driven by market needs and demand from industry stakeholders.

This includes insights gathered from market surveys that highlight the importance of a particular commodity within specific industrial sectors. In-house research plays a key role in identifying emerging trends and the evolving requirements of the market.

Furthermore, feedback from stakeholders, gathered through the Query Management System (QMS) portal, often signals the need for a new assessment, especially for heavily traded commodities.

These inputs ensure that the methodology is both relevant and aligned with current market dynamics, fostering

transparent price computation and informed decision-making in commodity markets.

1.5 Methodology flow chart

Defining the methodology for price assessment involves a systematic process to ensure clarity, accuracy, and reliability. It begins with a thorough study to understand the market, followed by the collection of market data from a wide cross-section of participants. Subsequently, utilizing our rigorous rational-based computation mechanism, the final price is determined and published.

The overall methodology comprises seven primary stages, as summarized in the process flow diagram. Detailed explanations of each stage are provided in the preceding sections of this report.

2. Market study

A market study for price assessment involves a comprehensive analysis of various factors influencing the pricing dynamics within a specific market or industry.

2.1 Purpose of market study

A market study serves as a solid foundation for conducting precise and informed price assessments. It entails analyzing crucial elements such as market size and growth forecasts, demand-supply dynamics, historical and seasonal price trends, competitive landscape, regulatory influences, consumer behaviors, economic indicators, and risk factors.

2.2 Data analytics tools

Certain market tools and analytical approaches play a pivotal role in illuminating these dynamics, facilitating deeper insights into market behavior and trends. These include:

Capacity: It reflects the infrastructure, technology, and resources available for production. It also helps stakeholders understand the scalability and growth potential of industries or sectors within the market.

Production: Production data in a market study quantifies the real-time output of commodity within a defined period, offering insights into production efficiency, output trends, and the capacity to fulfill market demand. This information is crucial for businesses to optimize production schedules, maintain appropriate inventory levels, and swiftly adapt to fluctuations in demand.

Consumption: Consumption data in a market study monitors the utilization of commodities, analyzing patterns, trends, and factors influencing consumer behavior. This information is essential for businesses to comprehend market demand, predict future consumption patterns, optimize logistics, and customize marketing strategies to effectively target specific consumer segments.

Export/Import: Export and import data in a market study quantify the exchange of commodities between countries, encompassing trade volumes, values, tariffs, and the influence of trade agreements on market integration. It enables businesses to pinpoint potential export markets, evaluate their competitive standing, and navigate regulatory complexities associated with international trade.

3. Price assessment mechanism

This section provides descriptions of the methods utilized for gathering and processing market data to ensure the creation of reliable price assessments.

3.1 Category of Price Assessments

Price assessments for various commodities are generally classified based on the nature of the transaction, delivery destination, and publication frequency, depending on the market being evaluated.

3.1.1 Classification based on nature of transaction:

- **Spot:** This assessment involves the immediate exchange and delivery of a commodity at the current market price, typically occurring shortly after the transaction agreement is made.
- **Long-Term:** This assessment is defined for agreements where the price, terms, and delivery conditions are established for a transaction that will take place over a prolonged period. The price could be fixed, or it may have terms for adjustment based on certain factors.
- **Future Transactions:** This assessment involve contracts for the delivery of commodity at a predetermined price, to be executed at a specified future date. These contracts are typically standardized and traded on exchanges.

At BigMint, our price assessments are based on spot pricing, where transactions are settled immediately at the current market price.

3.1.2 Classification based on destination of delivery:

- **Domestic Delivery:** Commodity traded within the borders of a single country.

- **Import Delivery:** Commodity brought into a country from abroad.
- **Export Delivery:** Commodity shipped out of a country to foreign markets.

3.1.3 Classification based on publication frequency:

The frequency of assessments is determined based on market liquidity, volatility, the urgency of market activity, and other characteristics of the particular product.

- **Monthly assessment:** These are carried out once a month and provide a snapshot of the market price, reflecting longer-term trends.
- **Weekly assessment:** Weekly assessments are carried out once a week and reflect trends and price movements over the course of the full trading week.
- **Bi-weekly assessment:** These are carried out twice within a week to show volatility on a broader level than weekly assessments.
- **Daily assessment:** These involve determining the market price of a commodity on a daily basis. For certain commodities, assessments are done multiple times a day to capture market volatility throughout the day.
- **Out of Schedule assessment:** This refers to conducting price assessments outside the regular schedule, usually due to market volatility, to capture real-time changes not reflected in standard assessments.

3.2 Data collection

BigMint collects comprehensive, relevant, and verified data from market participants to ensure accurate assessments. The goal is to gather detailed transactional information, including quality, specifications, order sizes, dimensions, lead times, and delivery details. This approach enables a thorough understanding of market dynamics for each commodity.

Our analysts continuously seek active participation from knowledgeable contributors to maintain the integrity of our price assessments.

3.2.1 Who can report

We proactively reach out to a wide range of market participants for each assessment. However, we also encourage any participant with relevant, non-speculative information, provided in good faith, to contribute.

As part of the data collection process, we onboard market participants following extensive market research, who actively contribute market data for price assessments.

These participants, identified as key players in the commodity market, are contacted, onboarded through a non-disclosure agreement, and subsequently enrolled in the data collection process.

BigMint is committed to continuously expanding its participant base to enhance the quality and reliability of its pricing processes.

An exhaustive list of market participants includes:

- Manufacturers
- Buyers
- Sellers
- Traders
- Brokers
- Auction/Trading Platforms

Data received outside of designated participant can be used in pricing computation only if it is relevant and thoroughly verified.

3.2.2 How to report

BigMint accepts the most commonly used communication tools available for market participants to report their price information. Therefore, any means of reporting a price or useful information is accepted.

Various means of communicating information with BigMint include:

- Telephone
- Email
- Text messages
- Instant messaging platforms (WhatsApp/Skype)
- In person

3.2.3 What to report

We encourage our market participants to submit all types of market data, including but not limited to following:

- Concluded transactions
- Firm bids
- Firm offers
- Indicative bids and offers
- Tender/Auction results
- Freight rates
- Price spreads

We encourage participants to submit data in the correct format and by the specified deadline, aligning with assessment criteria and maintaining quality and integrity standards.

The data submitted by market participants is reviewed on a quarterly basis. If a participant is found to submit inaccurate data that deviates from the market in over 50% of instances across the collection windows within the quarter, their right to submit data may be revoked.

To ensure continuity, we enroll 2-3 participants within the company, ensuring uninterrupted data collection even in the absence of any individual contributor. This approach

mitigates the risk of data gaps and maintains a consistent flow of information.

Under no circumstances can a participant demand that their data be used in the assessment. The assessment decision always rests with the analyst. Furthermore, any information submitted after the timestamp of an assessment will not be considered for assessment process.

The data submission policy emphasizes the completeness of data across various specified aspects, as outlined below:

- Laycan: The BigMint price assessments incorporate loading and delivery schedules specific to each market evaluated.
- Incoterms: The delivery or loading locations are determined as per the assessment specification guide.
- Quality: Each assessment precisely outlines the quality standards and specifications as detailed in the specification guide.
- Quantity: Quantity typically refers to the volume or amount of the commodity being traded or evaluated.
- Currency: The currency utilized in the assessment aligns with the customary trading currency for the respective commodity, as specified in the specification guide. Common currencies include Dollar (\$), INR, RMB, etc.
- Unit of Measurement: The chosen unit of measurement corresponds to the prevailing trading unit in the market. Common units include metric tonne (t), kilogram (kg), and pound (lb.).
- Payment Term: Payment terms specify the mode of payment for commodity trade transactions. These typically

involve either advance payment, where the buyer pays upfront before delivery, or credit terms, where payment is made after delivery, usually within an agreed-upon period.

3.3 Data collection window

Data Collection Window refers to the specific time frame during which data is collected from market participants for the purpose of assessing and publishing prices. Any data collected after the closing of the window will be considered in the next assessment cycle.

The data collection windows for different commodity markets are documented separately in the annexure.

For out-of-schedule price assessments due to market volatility, the ideal data collection window must be short, responsive, and align with periods of heightened market activity. Clear communication with market participants is essential for transparency, and the collected data needs to be analyzed and assessed promptly to ensure an accurate reflection of volatility or anomalies.

3.4 Market data used

We include all market information for computing final price provided it meet the minimum quantity, delivery, timing and specification requirements of the specific assessment. Any data falling outside this range must not be considered for price computation.

It is ensured that the collected bids/offers are clearly available for execution by any other potential market participant.

In addition, analysts are trained to thoroughly verify data that falls under the following cases:

- Deals between related parties or affiliates should not be included.

- Deals identified by other market participants as potentially anomalous for any reason.
- Deals reported differently by one counterparty compared to the other.
- Any deals that appear illogical or deviate from normal trading behavior. This may include, but is not limited to, divergent specifications, unusual delivery locations, or counterparties that are not typically seen.

Based on this evaluation, analysts make decisions about which data should be included or excluded.

3.4.1 Data validation

Our team rigorously analyzes market data to ensure its reliability, verifying it with reputable sources and employing commodity-specific methodologies. Analysts use various techniques, such as cross-checking and documentation requests, to confirm data quality. In cases where data cannot be sufficiently verified, it may be excluded from our analysis.

3.4.2 Hierarchy of information

The publication frequency is determined based on market liquidity and volatility. Accordingly, the data collection window for each assessment has been established.

All relevant market data captured within this window is given equal preference and is included in the hierarchy without any preferential weighting.

In cases where certain market data does not meet the specified criteria for final computation, a normalization technique is applied to ensure alignment with the rest of the data-set.

3.5 Data Normalization

Normalization refers to the process of adjusting or standardizing market data to ensure it aligns with a specific set of criteria or standard definitions. This process evaluates the market data against the BigMint assessment specifications to ensure the final published assessment is fully representative.

Our analysts apply normalization techniques to non-standard data to align it with the established methodology and base standards.

The normalization procedures are tailored to each commodity based on relevant parameters. These procedures are implemented in accordance with feedback received from market participants, and the normalized values are carefully recorded and documented for future reference.

Parameter	Description
Quantity	Adjust for trading volume differences to ensure transaction comparability.
Quality/Specifications	Align products with similar quality/specifications for consistent price comparison.
Currency	Normalize prices by converting currencies to a common standard using exchange rates.
Unit of Measurement	Standardize units of measurement for consistency in quantity comparison across transactions.
Incoterms	Adjust based on delivery responsibility, factoring in costs, risks, and transportation duties.
Delivery Term	Update for location, shipping method, or transport cost changes to ensure accurate pricing.
Payment Term	Modify for variations in due dates, discounts, or currency fluctuations to reflect true cost.

3.6 Outliers & exclusions

BigMint employs a 'standard deviation' method to identify and remove outliers from market data captured during collection window. The normalized values are aggregated, and the mean is computed. Any data points that fall outside the range defined by the Mean + Standard Deviation (upper limit) and Mean – Standard Deviation Variance (lower limit) are excluded, ensuring the accuracy of price discovery.

Additionally, any transaction, offer, bid, or indicative price recorded before the publishing window is considered an outlier and removed.

An analyst may make adjustments to outlier data following consultation with the manager. Any such modifications must be clearly justified, and properly documented. The rationale should outline how the adjustments enhance the accuracy and reliability of the assessment.

3.7 Data Rationalization

Rationalization in price assessment refers to the process of adjusting and refining market data to ensure it accurately reflects the true value of a commodity.

BigMint determines the final price using a weighted approach, which begins with the application of standard deviation to remove outliers. The remaining market data is then used for the final computation.

Market data is divided into two main categories: Transaction (T1), which includes Transaction Prices, and Non-Transaction (T2), which encompasses Offers, Bids, and the Most Tradable Prices. For each category, a single price is calculated by averaging the available data within that category.

For Transaction Prices (T1), when sufficient volume data is available, a weighted average is used. In the absence of volume data, a simple average is applied. If the data includes both volume-based and non-volume data, individual prices are calculated for each type using the appropriate average method and then combined to determine the aggregated price.

The final price is determined by assigning equal weights (50%) to the single prices from both the Transaction (T1) and Non-Transaction (T2) categories. The two prices are then combined to compute the final assessment.

In the event that data under the T1 category is excluded due to outlier detection, and no remaining data is available within this category for final computation, the entire weight of 100% shall be assigned to the T2 category for determining the final price.

Exceptions to these guidelines apply to assessments based on price revisions for a company or auction-based price assessments.

3.8 Control measures

In developing price assessments, BigMint implements several control procedures to ensure accuracy, reliability, and transparency throughout the assessment process.

3.8.1 Guidelines for exercise of judgement

BigMint's methodology minimizes ad hoc judgment in price assessments by prioritizing data-driven approaches. However, when quantitative data is insufficient or unreliable, expert judgment is used. Similarly, in cases of contradictory data or volatile markets, expert judgment helps reconcile discrepancies, ensuring more accurate and realistic assessments.

Analysts apply judgment when determining

- 1) whether information is suitable for publication;
- 2) when and how to normalize data; and
- 3) where to assess final value.

This judgment is informed by industry feedback, market trends, and qualitative insights.

3.8.2 Ensuring consistency in judgment

Consistency in the exercise of judgment is essential for maintaining transparency and reliability in market assessments. This is achieved through the implementation of standardized guidelines, comprehensive training programs, and systematic processes.

Market analysts are regularly trained and assessed across various markets to ensure a consistent approach to judgment. This training is supported by detailed internal guides that incorporate potential scenarios where judgment may be exercised, and standardized approaches are provided to help analysts apply their discretion in a structured and consistent manner.

Furthermore, critical analysis of all available information, combined with peer reviews and quality checks, helps to ensure that judgments are well-supported and accurate. The use of automated systems for calculations further reduces the potential for inconsistency, ensuring a reliable and transparent assessment process.

3.8.3 Market threshold data

Threshold data refers to the minimum amount of market data required for an accurate price assessment.

While we do not impose strict minimum data requirements, we are dedicated to providing reliable value assessments for all markets, whether liquidity is high or low.

To maintain the integrity of our assessments, we aim to collect at least five (5) market data points for each assessment to arrive at a reliable price. While there is no maximum limit on the number of data points,

we focus on capturing all pertinent information available during the collection period. However, the minimum required number of data-points may vary in markets with fewer participants or during periods of exceptionally low liquidity.

In liquid markets with ample market data, the available information is validated, organized according to a defined hierarchy, and processed using the established methodology to determine the final price. However, if market volatility is unusually high, expert judgment may be used to adjust the price for greater accuracy and to decide whether an out-of-schedule assessment is needed.

During illiquid market conditions, when trading activity is low and there are fewer transactions or active participants, there is often a lack of sufficient and reliable market data to accurately assess prices. Such conditions can arise due to factors such as holidays, political unrest, or natural calamities that disrupt normal market activity, leaving participants without clear direction.

In cases where the disruption is caused by a market closure, we may either roll over the previous prices and publish them on the portal or hold the assessment until conditions improve.

If the market is open but activity is low, the analyst will publish a representative price, referred to as the 'price under review.' This price is determined based on expert judgment, often by polling market participants to identify the most tradable price levels. Once market conditions stabilize, the price will be reassessed using the standard price computation process.

Any decision made to address such market distortions will be communicated to clients via circulars or announcements.

3.8.4 Significant proportion of input data

We include all relevant and verified data collected within the specified collection window. However, if more than 50% of the market data used to determine a price comes from a single source, the analyst will perform a detailed review to ensure the assessment remains accurate and reliable. This process may involve comparing the current data with previous pricing cycles to identify any inconsistencies, irregularities, or potential manipulation.

3.9 Assessment checks & approvals

After following the various computation procedures, the final prices for the assessment are published only after approval from the relevant authority.

We have adopted the maker-checker concept for assessment checks, where assessments carried out by Analysts (makers) are reviewed, verified, and approved by a Manager (checker). Physical records of approval, post-validation, are maintained on a daily basis.

If the relevant manager is absent, the GM/AGM will conduct the inspection and sign for approval.

3.10 Data dissemination

Once approved, the final assessed prices are published on the website and mobile apps according to a predefined schedule, ensuring that users have consistent and predictable access to the information.

3.10.1 Publication schedule

BigMint publishes its price assessments daily, weekly, biweekly and monthly. The publication times for all products are clearly defined in the BigMint assessment specification guide, aligned with periods of higher market activity and liquidity.

Publication times are generally adhered to, but a flexibility window of up to 30 minutes before or after the scheduled publication time may be applied, based on specific market conditions or unforeseen circumstances.

In special cases, such as price revisions for a company or auction-based assessments, there is no fixed publication time.

In these cases, assessments are conducted based on the availability of data.

Price assessments are conducted on working days, with the exception of public holidays when the office is closed. If an assessment is scheduled on a public holiday, it will be carried out on the previous/next working business day. Clients will be notified of any changes to the publication time through circulars or announcements.

Similarly, a circular will be issued for assessments conducted out of schedule in the event of significant market volatility.

Publication schedules may also be adjusted due to unforeseen events such as network or power failures, disruptions, or internal decisions. In such cases, BigMint endeavors to provide advance notice of any changes to stakeholders.

3.10.2 Delay in price reporting

A delay in price reporting is considered material if it exceeds 30 minutes after the scheduled publication time.

If delays in price reporting are anticipated, the responsible department must notify clients promptly with clear and concise communication. This communication should include the reason for the delay, an estimated timeline for resolution, and details of any interim measures being implemented.

Analysts must take expedite efforts to esolve the cause of the delay and restore timely price reporting.

In the event of a late publication, standard practice dictates that only data received within the designated collection window will be included in the price computation. Any market data received after this window will be excluded from the calculation.

A post-delay analysis will be conducted to identify the root cause of the delay, and appropriate measures will be implemented to prevent future occurrences.

3.10.3 Corrections & clarifications

BigMint will issue corrections to assessments if errors occur due to data entry mistakes or unintentional omissions that lead to a material change in price during the price computation process. However, prices will remain unchanged if new transaction or bids/offers emerge after the data collection window has closed.

Corrections will also be applied to prices marked as 'price under review', which are published as representative prices in cases of market distortion. These prices will be revised and adjusted according to the standard computation process once market conditions stabilize.

3.11 New price launch procedure

BigMint introduces new price assessments for commodities based on internal research and client requirements by following a defined procedure prior to implementation.

For new price assessments, a consultation period will be initiated through the publication of a notice inviting feedback from clients within a specified timeframe.

This notice will outline the consultation details, including an overview of the new assessment, its specifications, other

relevant parameters, as well as the implementation timeline and proposed publication schedule. Instructions for submitting feedback will also be provided.

Feedback will not be sought for new assessments on existing markets prior to implementation, nor for strategic new assessments related to a product launch to protect BigMint's strategic advantage.

At the conclusion of the consultation period, BigMint will evaluate the feedback received from clients and subscribers to determine whether to proceed with the launch of the price assessment.

If the decision is made to proceed, analysts must first submit a comprehensive market survey form along with a declaration affirming that they will maintain and align the publication according to the established methodology. The form includes a questionnaire requesting detailed information on the overall market analysis, data collection process, methodology, and other relevant queries to ensure proper record-keeping before initiating the price assessment.

Once approved, an announcement will be made to relevant stakeholders regarding the launch of the new price assessment, and a pricing notice will be issued on the day the assessment is onboarded.

3.12 Cessation of assessment

BigMint may consider discontinuing an assessment under circumstances where it is unable to produce quality benchmark assessments according to the defined methodology.

Factors leading to this decision may include the emergence of competing assessment methods, concerns over the quality, rigor, and validity of the assessments, as well as external factors such as regulatory changes or market dynamics.

In such cases, BigMint will issue a notification regarding the cessation of the assessment, specifying whether it is permanent or temporary, along with the reasons. This notification will be displayed on the announcement page.

4. Flow Chart

4.1 Price assessment mechanism

4.2 Complaint handling procedure

This mechanism is for addressing complaints and other inputs received through the Query Management System (QMS) from external stakeholders, including clients, business partners, interns, vendors, and third parties.

* Inputs may include feedback, suggestions, recommendations, or other concerns and queries.

* Complaints and feedback must be submitted in writing, either via Freshdesk chat, as a formal business letter addressed to our corporate office, through email to our support team.

* Submissions made through other channels will not be considered.

Email for communication: support@bigmint.co
Abbreviations Used: BD-Business Development | POC-Point of Contact

4.3 Market participant onboarding

(1) Process involves screening based on various factors to verify the qualifications and market standing of a participant.

(2) Details of market participants are recorded in the operations module.

(3) This marks inclusion of data submitted by market participant in price calculations and news publishing.

(4) An Acknowledgement is sent via email or text message, confirming onboarding and adherence to fair data collection.

(5) Indicates exclusion of market participant from data collection due to dispute or inaccurate info.

5. Adherence to IOSCO Compliances

The methodology has been crafted to ensure transparency, integrity, and reliability within commodity markets by aligning with IOSCO principles for compliance.

5.1 Ensuring consistency & continuity

BigMint ensures consistency in price reporting by following standardized procedures and using technology to reduce subjectivity. Secondary analysts are assigned to each assessment and used to maintain an accurate, reliable, and repeatable pricing process.

To ensure leadership stability, Managers must serve a minimum of three years, with annual succession plan reviews to facilitate smooth transitions and ensure adequate staffing for commodity markets. We also implement job rotation program to foster skill development and enhance flexibility.

Additionally, the company encourages broad participation from market participants to strengthen the reliability of its price assessments.

5.2 Quality & integrity monitoring

We ensure the quality and integrity of our price assessments through careful validation of data sources, standardized methods, and strong quality control measures. Transparency and accountability are key, supported by detailed documentation and feedback systems that promote continuous improvement.

We use technology to improve efficiency and accuracy while maintaining the independence needed for credibility. Our proprietary Operational Module helps monitor each benchmark assessment by reviewing input data, decisions on inclusion/exclusion, and automated calculations.

Continuous market monitoring ensures our methodologies stay relevant and up-to-date.

5.3 Code of conduct

The Code of Conduct requires all employees to adhere to the guidelines set forth in the policy, maintaining high ethical standards in both their professional and personal behavior.

Additionally, we have implemented a whistleblower mechanism that allows employees to report any misconduct or wrongdoing within the company.

5.4 Training & Supervision of analysts

Our selection process requires analysts to meet specific minimum qualifications as an eligibility criterion for conducting price assessments. Once appointed, analysts are required to complete the Analyst training program, which includes comprehensive modules designed to prepare them for their roles. Upon completion of the training, analysts must pass mandatory tests to ensure they possess the necessary knowledge and skills.

Analysts must also complete a mandatory plant visit to gain firsthand experience of operational processes, providing a deeper understanding of the plant environment and ensuring a well-rounded perspective for accurate price assessments.

When assigned to a market, analysts first undergo job-specific training, which includes market analysis, system use, price assessment procedures, and understanding methodology guidelines.

Initially, analysts cannot contact market participants for data collection and instead participate as listeners while managers handle market information calls. They are only integrated into the price discovery process after gaining both theoretical knowledge and practical experience.

Analysts continue to receive ongoing training to expand their market knowledge, data sources, and analytical skills. Managers closely monitor analysts' daily activities, including data collection and price assessments, and regularly review their assessments for accuracy before publication.

5.5 Conflict of interests

We have identified potential risks that could lead to conflicts of interest in price assessments and have implemented measures to address them. To maintain independence, we keep the price assessment team separate from other business functions.

Each year, employees must submit a declaration regarding business conduct, ensuring they do not manipulate the market or trade based on the information they are responsible for assessing.

We promote transparency and accountability through regular reviews and ongoing training. These efforts raise awareness of the importance of impartiality and provide employees with a clear process for reporting any potential violations.

5.6 Data security

Data security for price assessments is ensured through multiple methods, including storing data on licensed, secure servers and implementing strict access controls. All sensitive information is encrypted both during transmission and at rest to prevent unauthorized access.

Employees receive regular training to enhance their awareness of security best practices, including recognizing phishing attempts, managing passwords securely, and adhering to company policies for handling confidential data.

5.7 Complaints handling procedures

Complaints about price assessments are handled through the Query Management System, which tracks all inputs, including queries, feedback, suggestions, and other concerns.

To ensure proper resolution, complaints, suggestions, and feedback must be submitted in writing, either via Freshdesk chat, as a formal business letter addressed to our corporate office, or through email to our support team. Submissions made through other channels will not be considered.

The support team records these queries and works with the relevant departments to address them. For any internal misconduct or wrongdoing, a separate whistleblower mechanism is in place for reporting and action.

5.8 Audit trails

Audit trails are maintained through contemporaneous documentation and retention of all relevant information and decisions made during the price assessment process.

This includes records of data collection, exclusions, and the final price discovery, with all information stored for a specified retention period.

These audit trails are designed to ensure transparency and facilitate inquiries by market authorities, supporting accountability and the integrity of the price assessment process.

5.9 Periodic audits

Internal audits are conducted by the compliance team to monitor the effectiveness and integrity of our processes.

Additionally, we undergo an annual review by an external auditor. For FY24, we engaged Sarda & Pareek Chartered Accountants to evaluate the accuracy of our price assessments, which was successfully concluded. The audit assurance report is available for public viewing on our website.

6. Methodology Review

Periodic reviews provide an opportunity to evaluate the effectiveness of the methodologies used in data collection, analysis, and interpretation.

6.1 Methodology changes

BigMint's price assessment methodology is reviewed annually or whenever there are significant market changes, new product launches, or regulatory updates to ensure it reflects current market trends and evolving trading and pricing conditions.

To initiate the annual review, BigMint issues an open consultation at least one month before the scheduled review date, inviting feedback from clients during the consultation period. Additionally, market participants may request immediate adjustments to the methodology, which will be addressed through an open consultation if necessary.

For clarifications to an existing methodology that do not alter the assessment, feedback will not be sought.

During this period, BigMint publishes a notice outlining the consultation details and providing instructions for submitting feedback. The notice includes an overview of any proposed changes, the rationale behind them, and a proposed implementation timeline.

After the consultation period concludes, BigMint reviews all feedback received, including any suggested changes to the methodology, and finalizes the revised methodology following the approval process.

The outcome of the review will be communicated through a notice, which will detail the rationale for the decision and summarize the feedback collected, unless confidentiality is requested.

6.2 Methodology approval

Methodology for price assessment is typically approved through a structured process involving multiple steps. First, the development or modification of a methodology is proposed by the relevant team.

Then, the proposed methodology undergoes internal review and analysis to assess its feasibility, accuracy, and alignment with organizational goals and industry standards. Following this internal review, the methodology is presented to the management for approval.

Upon approval, the methodology is documented and communicated to the relevant stakeholders.
